

December 2022

BlackRock

Sustainable Emerging Markets Bond Fund A sub-fund of BlackRock Global Funds (BGF)

The Fund is actively managed, and the investment adviser (IA) has discretion to select the Fund's investments, provided that the Fund will invest at least 70% of its total assets in fixed income (FI) securities within the J.P. Morgan ESG Emerging Market Bond Index Global Diversified (the "Index" and the securities comprised within it being "Index Securities") which comprises FI securities issued by governments and government agencies of, and companies domiciled in, or the main business of which is in, emerging markets. The Fund will also refer to the Index for risk management purposes to ensure that the active risk (i.e. degree of deviation from the Index) taken by the Fund remains appropriate given the Fund's investment objective and policy. The IA is not bound by the weighting of the Index when selecting Index Securities. The geographical scope and the environmental, social and governance ("ESG") requirements of the investment objective and policy may have the effect of limiting the extent to which the portfolio holdings will deviate from the Index. The Index should be used by unitholders to compare the performance of the Fund.

FOR PROFESSIONAL, INSTITUTIONAL, AND QUALIFIED INVESTORS/PROFESSIONAL CLIENTS AND EXISTING SEA PROFESSIONAL INTERMEDIARIES ONLY

FIM1222E/M-2632347-1/53

Seeking sustainable objectives and durable alpha.

BlackRock's active investment teams seek to identify Environmental, Social, and Governance (ESG) insights that expose potential risks and country growth drivers – uncovering potential investment opportunities that seek to address both alpha generation and sustainability goals.

BlackRock Emerging Markets Debt (EMD) Capabilities

FOR PROFESSIONAL, INSTITUTIONAL, AND QUALIFIED INVESTORS/PROFESSIONAL CLIENTS AND EXISTING SEA PROFESSIONAL INTERMEDIARIES ONLY

BlackRock's EMD Edge

Vast Resources and connectivity

- 34 PMs, strategists and risk managers covering the whole EMD spectrum: from short duration to total return.
- Deeply Integrated in one of the world's most sophisticated Global Fixed Income machine led by Rick Rieder.*
- **Diverse team** with 19 nationalities speaking 17 languages.

Solution providers

- We engage with our clients and offer efficient solutions for their EM needs—whether benchmarked, benchmark-aware or total return.
- Our proprietary "Lego Blocks" framework permits scalable customisation.
- Our relationship does not stop when an investment is made; our service is best-in-class.

A **powerful research engine** seeks to generate durable **alpha across the full spectrum** of emerging market debt.

Powerful Research Machine

- 300 pages **weekly** of dashboards, models, and signals.
- Analysis structured around a "research pods" system and synthesised in Weekly Investment Summary of Views.
- Heavy reliance on the quantitative, technology, and data resources that only BlackRock can provide.

ESG integration

- ESG is fully integrated into our process, supported by BlackRock's Fixed Income ESG platform and Sustainability team.
- We are pioneers in EM ESG research covering both sovereign and corporate issuers.*
- Strong expertise in GSS bond markets allows us **issuer engagement.**

There is no guarantee that a positive investment outcome will be achieved.

*In 2018, Blackrock partnered with JP Morgan index team to launch first of its kind ESG indices in EM Fixed Income Source: BlackRock, as of 30 November 2022. Subject to change.

FOR PROFESSIONAL, INSTITUTIONAL, AND QUALIFIED INVESTORS/PROFESSIONAL CLIENTS AND EXISTING SEA PROFESSIONAL INTERMEDIARIES ONLY

Our Philosophy

EM has transitioned and requires a different mindset

The EM Dilemma:

- A high yielding asset class that has the capacity to deliver clear alpha opportunities
- A volatile asset class with less liquidity than other fixed income categories

Our dedicated EM Debt team strives to help clients efficiently capture opportunity while managing downside volatility

1. No secret EM sauce

Only rigorous, well structured research can provide durable alpha.

4. EM can not be a silo

EM is a part of a larger fixed income universe and needs to be analyzed in absolute *and* relative terms.

2. No size fits all

The asset class is complicated and heterogenous - we listen carefully to our clients to offer the desired "EM": whether benchmarked or customized.

3. Risk control is key

Diversification is key to muting volatility, and our teams operate in deep partnership with RQA.

5. Carry wins

EM is a highly yielding asset class. Monetizing the premium is superior to repricing plays.

6. Sustainability matters

ESG can be material to the performance of EMD issuers and must be incorporated in our research

Risk management cannot fully eliminate the risk of investment loss. Source: BlackRock, as of 30 November 2022. Subject to change.

EMD

Impact

Our ESG approach for Active EMD

Our EMD Team incorporates ESG in multiple ways:

- 1. Since ESG can be material to the performance of EMD, we fully incorporate it in the bottom-up research process. Therefore, integration applies to both Sustainable and traditional strategies and products
- 2. While automatic sustainability filters are applied to ESG Strategies, our active approach seek to exclude highly reputational risky names and fallen angels, from both Sustainable and traditional portfolios
- 3. Our EMD Sustainable strategies, whether article 8 or 9, have clear Sustainable objectives that coexist with financial objectives

ESG integration	ESG exclusions	Sustainable investing
For every single holding	Rules based vs. active	Setting sustainable objectives
 Deeply applied to all EMD strategies utilising several internal research frameworks and dashboards 	• All EMD strategies implement a proprietary toxicity framework to manage headline risk	 Whether Sustainable Development Goals (SDG) alignment, carbon emissions or temperature alignment, all of our Sustainable products have sustainable objectives
 ESG materiality analysis is integrated in every single issuer as part of our bottom up research process. 	• EMD Sustainable strategies implement baseline screens and comply with BlackRock's PEXTNEXT framework	 Our deep expertise in Green, Social and Sustainable (GSS) bond markets allows us to maximise opportunities for engagement with issuers.

Environmental, Social, and Governance (ESG) considerations are evaluated alongside a number of other considerations, and/or would not be the sole consideration when making investment decisions.

EM Sovereign Yield versus FI asset classes

- Over the long term, the EMBI GD index has an annualised return of 6.29%
- The EMBI universe offers an attractive yield versus other FI asset classes, with the opportunity to further improve yield by increasing allocation to EM HY
- The index has a **higher risk-adjusted return** versus the Bloomberg Global Aggregate Bond Index

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

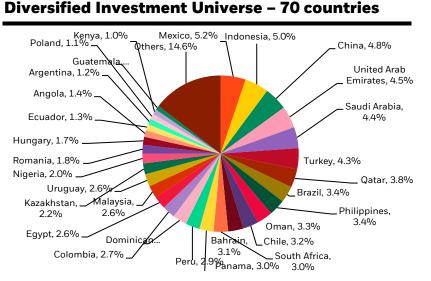

Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

 Source: Bloomberg, as of 30 Novemberg, as

- Highly diversified, across regions and rating segments
- High coupon income in USD
- Long term performance vastly dominated by coupon
- Well **balanced exposure to commodities** (exporters and importers representing about half of the market capitalisation)
- Active managers may exploit the diverse opportunities across countries, ratings segments, income, duration and curve to generate alpha by using robust fundamental research

Geographic exposure relates principally to the domicile of the issuers of the securities held in the product, added together and then expressed as a percentage of the product's total holdings. However, in some instances it can reflect the country where the issuer of the securities carries out much of their business. Allocations are subject to change. Due to rounding, the total may not be equal to 100%.

FIM1222E/M-2632347-13/53

The Foundational Tenets of Our Research Process

For EVERY investment decision we make, we strive for a deep understanding of:

Where the Global Meets the Local

Connect the top down with the bottoms up

The Past versus the Future

Understand the past

Where we are (and why)

Project a forward looking view

Always define a baseline and articulate a distribution of possible outcomes.

The Analytic Trifecta

Fundamentals

A quasi academic research strand that looks "under the hood" in a systematic way.

Valuations

A rigorous approach to assessing "what is in the price?"

Technicals

Use proprietary dashboards to analyse flows, supply/demand, positioning, and risk appetite.

Investment Process Overview

The Research Library

Source: BlackRock, 30 November 2022. Investment process subject to change and provided here for illustrative purposes only.

Global Weather Station

Regime identification engine that specifies the macro and market regime EM is operating under and the Team's
projection of where those regimes are heading

Where are we coming from?

- Tools used
 - Stochastic regime identification tool.
 - o "EM Developments" dashboards.
 - Aggregation of country views.
 - Cross asset review analytics.
 - Valuation dashboards.
 - o Technicals dashboards.

Where are we heading?

- Two separate identifications:
 - Macro regime.
 - Market regime.
- Specify a baseline but be precise about distribution of possible outcomes. We use subjective probabilities for guidance purposes.
- Tools used:
 - Quantitative AA framework.
 - Formal Research Pod conclusion.
 - WIC discussions.
 - Team Votes.

Output

- Weekly Investment Committee (WIC) Summary of Views that specifies the Team's top-down and asset class level stances.
- The macro regime spider chart.
- The investment regime clock.
- Results of the quantitative asset allocation mode.
- The Lego Blocks that summarise the analyst's high-conviction investment expressions.

Source: BlackRock, 30 November 2022. Investment process subject to change and provided here for illustrative purposes only.

Local Weather Station – Sovereign Debt

Fundamental, valuations, and technical country level analysis

Fundamental Macro Research at the Country Level

Analysis of four factors for each country. Creation of a long-term macro score with a documented rationale, and upside/downside risks and signposts

Monetary Policy	Central Bank policy and inflation are closely monitored to determine the evolution of rates.					
Growth and Fiscal	Analysis of a wide set of variables such as employment level, debt/GDP ratio that defines a fundamental picture of an issuer.					
ESG & idiosyncratic	Country analyst views expressed across E, S and G factors, with a focus on materiality.					
Real Flows	Monitoring bond issuance, FDI and current account level to build a comprehensive technical picture.					

Example:

	Moneta Policy				ldiosyncra	Flows			Team View	
Country	Rates	FX	Growth	Fiscal	Idiosyncratic	ESG/Other	Flows	Current Account	FDI	
Mexico	-1	1	0	0	0	0	0	-1	1	NTRL

Complimented with Country Level Market Analysis by Asset Class

Analysis of hard currency, local rates and FX from a market perspective, with a focus on valuations and technicals

- Performance analysis
- Spread analysis
- Crossover comparisons
- Yield curve analysis
- Breakdowns by rating
- New issues monitors
- Regional analysis
- Valuations
- Technical/positioning analysis

Run by RQA. Brings in an "independent lens" of analysis

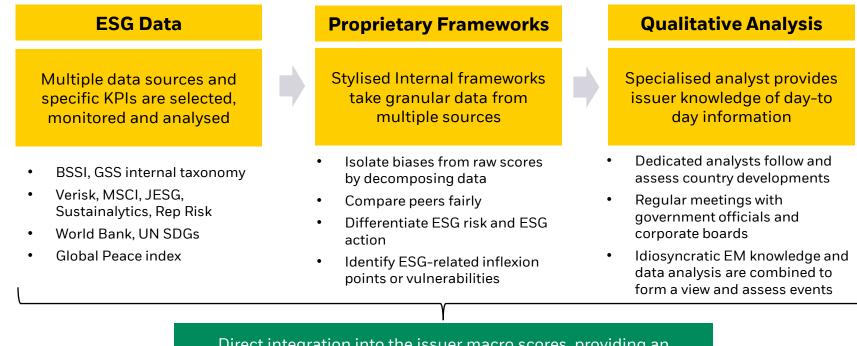

In-depth review of key risk parameters

- Review fund risk metrics including our proprietary risk measure ("blocks")
- RQA and CIO discuss with PMs each flagship fund focusing on changes, performance and adherence to mandate
- Scenario analysis and stress tests

ESG Integration

Analysing materiality

- In our view, certain ESG characteristics can have a material impact on EMD performance
- We seek to understand and manage ESG related **risks** while identifying inflexion points
- ESG coexists with other alpha factors such as monetary policy, fundamentals, and technicals

Direct integration into the issuer macro scores, providing an important dimension for security selection

Source: BlackRock, JP Morgan, MSCI, BSSI, World Bank, Verisk Maplecroft. Definition of the ESG metrics: JESG score = JP Morgan ESG scores are 0-100 percentile rank calculated based on normalised raw ESG scores from third-party research providers Sustainalytics and RepRisk. An issuer's finalized JESG score incorporates a 3-month rolling average. BSSI score = The BlackRock Sovereign Sustainability Index ranks 99 sovereign debt issuers based on performance on key sustainability metrics from the World Bank's ESG data portal for each ESG pillar and BlackRock's internal research tool for sovereign ESG research. SDGs = Sustainable Development Goals are a collection of 17 interlinked global goals designed to achieve a better and more sustainable future, set by the United Nations General Assembly and are intended to be achieved by 2030. DNSH = Do No Significant Harm principle.

Risk Measurement and Management

Organic and profound partnership with RQA

- Three RQA professionals dedicated to the EMD business
- RQA produces daily reports to cover the EMD platform, which includes:
 - Traditional risk metrics Standalone risk (SAR) per asset class, Marginal Contribution to Risk (MCR), duration, spread duration, DXS, HROR, constant vol, beta and realised beta, portfolio concentration
 - **Proprietary risk metric** ("blocks") allows RQA to measure risk on an "apples to apples" basis
 - Stress tests and scenario analysis
 - Performance data with detailed attribution
- RQA runs a weekly "risk meeting" in which they present their dashboards and discuss with PMs changes in portfolio exposure and risk

Concentration Philosophy

• RQA monitors portfolio concentration on the ongoing basis and discusses with PMs if necessary. RQA has the ability to escalate.

Sizing Philosophy

 Four criteria enter into deciding on sizing of expressions: level of conviction, volatility of the underlying expression, liquidity of the underlying expression, and the analyst's judgement on the upside/downside.

Risk management cannot fully eliminate the risk of investment loss.

Usage of Portfolio Hedges

• We actively use portfolio hedges and "air bags", But the bar for using them is high since they introduce basis (and unintended) risks. If we are uncomfortable with a position, our first port of entry is to cut it rather than hedge it.

Stop Loss Discipline

• We do not use automatic stop losses. But our risk meetings are very focused on analysing "losers" and the bar for maintaining them gets higher the larger the drawdown.

Source: BlackRock. RQA stands for Risk & Quantitative Analysis Group.

Risks

FOR PROFESSIONAL, INSTITUTIONAL, AND QUALIFIED INVESTORS/PROFESSIONAL CLIENTS AND EXISTING SEA PROFESSIONAL INTERMEDIARIES ONLY

FIM1222E/M-2632347-32/53

This document is marketing material: Before investing please read the Prospectus and the KIID available on www.blackrock.com/it, which contain a summary of investors' rights.

Risk Warnings

Capital at risk: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Changes to interest rates, credit risk and/or issuer defaults will have a significant impact on the performance of fixed income securities. Noninvestment grade fixed income securities can be more sensitive to changes in these risks than higher rated fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.

Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets, failed/delayed delivery of securities or payments to the Fund and sustainability-related risks.

Currency Risk: The Fund invests in other currencies. Changes in exchange rates will therefore affect the value of the investment.

Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way

For BGF Sustainable Emerging Markets Bond Fund:

Counterparty Risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily

FIM1222E/M-2632347-34/53

The wealth inequality challenge of ESG scores

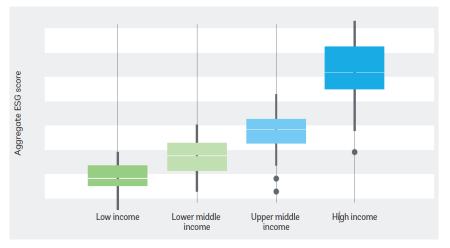

World Bank report "Equitable Growth, Finance & Institution Insights" ¹

- "Sovereign ESG scores are strongly correlated with a country's level of income, which may result in capital allocations toward richer countries at the expense of poorer ones, perpetuating an ingrained income bias cycle." (World Bank, 2021)¹
- "There is lack of agreement on how to measure sovereign environmental performance." (*World Bank, 2021*)¹
- The E,S,G and combined ESG scores are correlated with GNI per capita to varying degrees, depending on the ESG provider. The S scores are most correlated with little variation across providers, while the E scores are the least correlated with large discrepancies between providers.

Sovereign ESG may worsen SDG funding gaps

Investment according to ESG scores may worsen SDG funding gaps by incentivising capital flow towards wealthy countries.

Source: World Bank stuff Illustration. World Bank Publication 2021. Equitable Growth, Finance & Institution Insights. "A New Dawn – Rethinking Sovereign ESG".

Source: World Bank stuff Illustration.

¹ World Bank Publication 2021. Equitable Growth, Finance & Institution Insights. "A New Dawn – Rethinking Sovereign ESG".

ESG scores for selected countries

A traditional approach to ESG using ESG scores for active weights has two limitations in terms of materiality:

- 1. Significant wealth bias, with a high correlation between ESG score and the countries' wealth
- 2. Aggregated scores fail to reveal nuances that may be the pressure points for countries in months to come
- 3. ESG data updates infrequently, sometimes only once a year

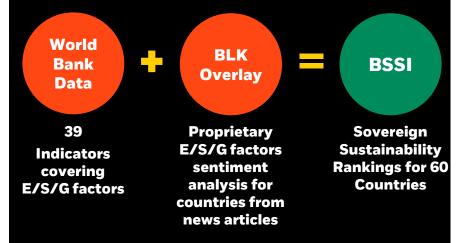

We favour an approach that assesses countries vs. rating/income peers, that looks for ESG improvers within peer groups and that adds well informed qualitative information.

Proprietary ESG scores - BSSI

BlackRock Sovereign Sustainability Index (BSSI)

We take into account three main questions that can influence a country's long-term standing from an ESG perspective:

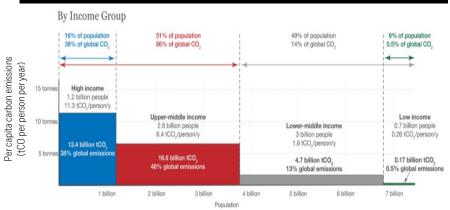

- 1. How is the issuer treating the environment and how exposed is it to climate risk?
- 2. How is the issuer investing in its citizens?
- 3. How effectively is the issuer governing its people?

Source: BlackRock, 30 November 2022 with data from Bloomberg and World Bank. For illustrative purposes only.

Richer countries consume more energy in absolute and per capita, but less per unit of GDP (intensity)

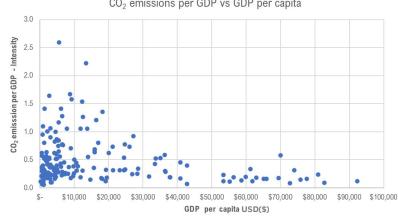

- As countries get richer, their overall energy • consumption increase, as there is a change towards the consumption of goods in a scale that require higher energy
- Think a combustion car vs a bicycle
- At the same time, poorer countries spend most of its energy consumption both inefficiently and in low value added products
- Think small production
- As a result richer countries consume more energy per person, but spend less energy to produce relatively more valuable products
 - Higher carbon footprint, absolute and per capita, but lower in terms of GDP
- There is a fairness problem to be resolved, in ٠ particular if we consider that a good share of poorer countries energy intensity is to satisfy the consumption needs of wealthier nations
- Think mining or assembly lines

Richer people, more emissions per capita

Source: Our World in Data based on data from the Global Carbon Project, UN Population Division (2018) & World Bank income groups. This is a visualization from OurWorldInData.org, where you find data and research on how the world is changing.

Poorer countries, more emissions over GDP

CO₂ emissions per GDP vs GDP per capita

Exclusions and Toxicity

• "Toxicity" is a concept that transcends traditional ESG metrics. We attempt to capture headline risks before, not after the fact.

Quantitative Analysis

• Sovereign (26 out of 136 metrics), for example:

- Democratic governance, Freedom of Assembly
- □ Factionalized Elites, Human rights
- □ Safety and Security, Militarization
- Rule of Law

• Corporates metrics:

- Violations of international norms and Controversy Flags (slavery, environmental destruction)
- Involvement in controversial businesses (certain fossil extraction, palm oil, tobacco)
- Quantitative sustainability disclosures and targets
- Quality of financial disclosure
- □ Shareholder reputation and history
- Minority shareholder rights
- □ Lowest BlackRock-rated ESG scores

Qualitative assessment

• Our analysts--sovereign and corporate—are profoundly knowledgeable of each name they cover

- Local knowledge including "speaking the language" and deep connectivity with local official policy makers and company management.
- Due diligence—actual and virtual. BlackRock name gives us exceptional access.
- Systematic linking of global developments (geopolitical and economic) to local factors.
- Use RQA for scenario analysis of binary events (wars, elections, corporate emergencies, etc)

Each analyst will provide a qualitative assessment on "Toxicity": high, medium, low

Source: Verisk, MSCI, Sustainalytics, UN, JP Morgan, BlackRock, as of 30 November 2022. For illustrative purposes only.

FIM1222E/M-2632347-40/53

In-house labelling of green and social bonds

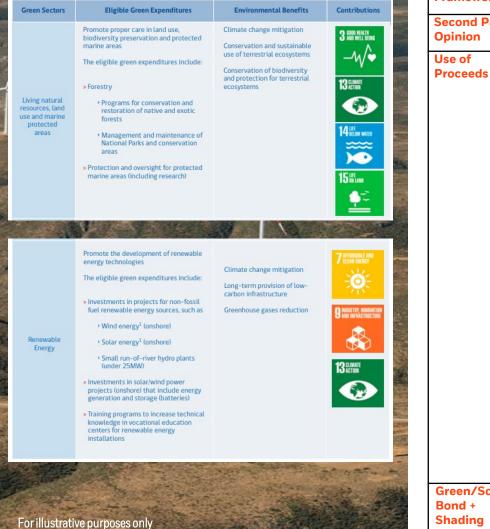

Filtering and Labelling

- We have developed a proprietary green bond taxonomy to label the green bond universe. We also actively engage with the market and issuers to push for best practices
- For social bonds, the issuer needs to follow the Social Bond Principles ("SBP"), voluntary process guidelines that recommend transparency and disclosure and promote integrity in the development of the Social Bond market.

Very Light Green							
Very Light Green	Li	ght Green	Medium Gr	een	Dark Green		
Fund projects that yield only marginal improvements over baseline energy consumption, CO2 emissions, etc. but are not yet aligned with long-term decarbonisation.	improv baselin consun emissic not yet long-te	rojects that yield ements over e energy nption, CO2 ons, etc. but are aligned with rm onisation.	Fund projects that yield improvements over baseline energy consumption, CO2 emissions, etc. and show some signs of alignment with long- term decarbonisation.		Fund projects that BlackRock determines to most likely put the world on a long-term path towards a zero carbon economy.		
Light Gold Fund projects that aims to address/mitigate a specific social issue but need further granularity and detail to reflect positive social outcomes, including better definition of target populations, contextualization to local and/or global social environments		Fund projects t address / mitig social issue and contribute to p	ate a specific d clearly ositive social defined target d appropriate nent	address social is result in outcom target p to cont	Dark Gold rojects that aims to a / mitigate a specific ssue and can quantifiably n positive social les, with well defined populations and specific ext of local and/or global invironments

Green Bond Example Republic of Chile

lssuer	Republic of Chile
Green/Social Bond Framework	Sustainable finance framework and current eligible projects can be found on the Ministry of Tax Authorities website: <u>Chile's Sustainable</u> <u>Bond Framework</u> (Nov 2020)
Second Party Opinion	Vigeo Eiris - <u>Chile's Sustainable Bond Framework</u> (Nov 2020)
Use of Proceeds	The Green Bond segment establishes six categories of eligible expenditures:
	Clean Transportation - construction and renovation of electric metro lines, electric buses, charging stations
	 Energy Efficiency - energy efficiency improvements for public buildings that results in energy efficiency gain of 20%+, e.g. retrofitting, thermal insulation, AC system upgrades
	Renewable Energy - onshore wind and solar, small hydro <25MW
	 Conservation of Biodiversity and Marine Resources - forest conservation and restoration programs, maintenance of national parks
	 Water Management - installation or upgrade of water efficient irrigation systems, construction or upgrade of sustainable infrastructure for drinking water, protection of water catchment areas, reservoir construction
	• Green Buildings - construction of sustainable public buildings and retrofits with min 30% carbon emissions reduction, buildings certified under "Sustainable Buildings Certification", a Chilean scoring system that evaluates environmental performance of public buildings in Chile (out of 100, to be certified, min must score 30
	 As of April 2019, the breakdown of potential green expenditures at USD\$4.4B (breakout: clean transport 92.2%, green buildings 7.2%, water management 0.4% and renewable energy 0.1%). Example eligible project is the construction of the Santiago Metro Line 3. <u>As</u> most of their eligible expenses right now are in clean transport, we consider this <u>dark green</u> by our methodology.
Green/Social Bond + Shading	YES – GREEN DARK GREEN

BlackRock

FOR PROFESSIONAL, INSTITUTIONAL, AND QUALIFIED INVESTORS/PROFESSIONAL CLIENTS AND EXISTING SEA PROFESSIONAL INTERMEDIARIES ONLY

	Table 3: Eligibl	e Social Categories			
Eligible Categories	Eligibility Criteria	Social Benef	fits	Contribution to SDGs	
Support for vulnerable groups and people in vulnerable situations ¹¹	Financing of programs and projects to improve financial and social inclusion and access to essential services in alignment with public policies for poverty reduction.	Programs aimed at ensuring the well-being of girks, boys, young people, the elderly, and women, to ensure adequate care that is closely related to three factors: the achievement of economic security, access to health services, and housing and quality education. Therefore, these programs require intersectoral and intergovernmental efforts that reflect the timely articulation of effective interventions.		1 mer 1	
Access to affordable housing, education and essential health services ²²	Financing of programs and projects aimed at improving and/or increasing access to education, housing and health services for vulnerable groups. Financing for the acquisition, repair, expansion, improvement of social housing (via schemes such as capped rent/rent control and other affordable home schemes to support home ownership). Financing of programs aimed at improving the quality and access to basic, middle and higher education for vulnerable boys, girls and young people. Financing for the development of health programs for preventive and curative purposes associated with vulnerable groups.	 Increase the quality of to education, health a services to vulnerable Promote equitable actor to essential services in discrimination on the of gender, ethnicity, re socioeconomic class 	2 mm 4 mm 10 mm 2 mm 10 mm		
1	Table 4: Eligible	Green Categories		A show	
Eligible Category	Eligible Expenditure	Environmental Benefits	Contribution to SDG	Alignment with Peru's NDC mitigation and adaptation measures	
Green Buildings	The financing and refinancing of expenditures related to: i. Construction and modernization of public buildings, with a 30% minimum reduction in carbon emissions ii. Design, construction and maintenance of public buildings certified under the "LEED" ³⁸ , "EDE", or "CERTIFICACIÓN LIVING BUILDING CHALLENGE" certifications iii. Costs associated with the modernization of existing public buildings to comply with one of the certifications recognized by this Framework, or to improve the current certification level within three years	 Climate change mitigation Energy savings Water savings GHG reduction 		ECE-19 Promotion of sustainable construction practices in new buildings	

Sustainability Bond Example Republic of Peru

lssuer	Republic of Peru
Green/Social Bond Framework	Peru's Sustainable Bond Framework - Ministry of Economy and Finance. (Jul 2021)
Second Party Opinion	Sustainalytics - <u>Peru Sustainable Bond Framework</u> (Jul 2021)
Use of Proceeds	 Allocations are 90/10 split for social and green proceeds. Across the social categories, social benefits are outlined. From its website, process to target population is well structured. We would rate this overall as dark gold. In terms of green categories, the 2021 budget has identified the following categories of focus: (1) resilient and efficient water and wastewater management, (2) sustainable agriculture, and (3) sustainable management of natural resources, land use and marine protected areas. For wastewater management, projects include water treatment, flood risk mitigation, and water conservation (light to medium green). For sustainable management of natural resources, wood production and forest management is in line with FSC standards (medium green). For sustainable agriculture, projects include drip irrigation, irrigation systems with improved water efficiency, and use of organic/sustainable fertilizers in agricultural practices (medium to dark green). Would be helpful to mention target efficiency improvements in irrigation systems and whether this does not add any emissions. Overall, would rate green projects as medium green.
Green/Social Bond + Shading	YES – SUSTAINABILITY MEDIUM GREEN/DARK GOLD

ESG Benchmark

Benchmark Construction

- By using an ESG benchmark, we restrict investments on controversial activities, and reduce tail risk by avoiding only the worst ESG inflictors
- The benchmark is used as a starting point, and the remaining universe remains large and diversified, allowing the team to conduct security selection effectively and as broadly as possible

ESG considerations are evaluated alongside a number of other considerations, and/or would not be the sole consideration when making investment decisions Source: BlackRock, J.P. Morgan. Data as of 30 November 2022.
